

When is

61% < .05%

?????

On What Nights Is

61% < .05%

?????

Go Figure

ANSWER:

On Friday & Saturday Nights

61% < .05%

of students

have less than

BAC

It's true! During the 2011 Fall term 206 randomly selected students were asked to participate in a blood alcohol concentration (BAC) measurement by anonymous breathalyzer when returning to HWS residence halls between 11pm and 3am throughout the week. These are the results for Friday and Saturday nights. Even higher percentages of students were below .05% BAC on other nights.

Research shows that risk of negative consequences from drinking is low if one's BAC stays below .05%. The majority of HWS students do it!
